

overview of build automation tools,key differences between maven and Gradle

Build tools are one of the essential components of the software development process. Their core function is to transform source code into executable applications. They also help build automation tasks, dependency management, debugging, test automation, code packaging & deployment.

Maven and **Gradle** are the most popular build tools available in the market and are widely used by most developer communities.

What is Gradle?

A flourishing build automation tool launched in 2008, combining apache's maven and ant concepts. Gradle is mainly preferred for its multi-language project support, flexibility, & customization.

What is Maven?

A widely used open-source software build & project management tool that the Apache Foundation improved from Apache Ant in 2004. Maven is based on **Project Object Model (POM)** & focuses on simplifying and standardizing the building process.

Difference between Maven and Gradle

Considering the functionalities & capabilities of a build tool, Both Maven and Gradle has some similarities and distinctive characteristics, making them to top-line of well-rounded build management tools available in the market.

Aspect	Gradle	Maven
Key Focus	Gradle is meant to add additional functionalities to the application.	Maven is meant to develop applications in a given timeline.
Language Support	Gradle supports languages like Java, C, C++, Groovy, Scala & Android.	Maven supports languages like Java, Scala, C#, and Ruby.
Configuration	Gradle uses DSL(Domain Specific Language) based on Groovy to configure projects.	Maven uses XML to configure projects.
Performance	Gradle allows multi-module builds to run in parallel. It performs better than maven due to features like an incremental build, build cache, API usage & compiler daemon that makes compilation faster.	Maven also allows multi-module builds to run in parallel, but its build time is longer as it lacks a build cache to create local temporary files. It does not support incremental compilations.
Customization	Gradle provides extensive customization to cover different ecosystems with its Groovy-based build script.	Maven offers limited customizations due to its project structure & focuses on pre-defined goals.

Aspect	Gradle	Maven
Dependency Management	Gradle uses a dependency tree approach, and IVY Metadata compatibility helps specify a version for a dynamic dependency & resolves the highest version dependency found in the tree. It allows for creating new custom dependency scopes, which leads to better modeled & faster builds.	Maven uses a declaration order approach and resolves dependency conflict based on the shortest path. It has a central JAR repository & facilitates the usage of JARs across the projects. Maven has a built-in dependent scope, and additional scopes cannot be added.
Debugging Tools	Gradle provides a web-based debugging tool called Build Scan for debugging & build optimization. It also allows for trend analysis, build comparison & history collection.	Maven has debug mode to identify the cause of errors. It also provides a Surefire plug-in for project debugging & Eclipse to debug test runs.

Why Gradle is used?

- Highly Customizable
- Multi-language projects
- Better IDE support
- Better Performance
- Incremental Builds

Downsides of Gradle

- Expertise scarcity
- Extensive Documentation
- Plug-ins Availability

Why Maven is used?

- Highly Standardized
- Streamlined Build Process
- Wider Component Builds
- Better Collaboration
- Reduce Duplication

Downsides of Maven

- No Incremental Compilations
- Lacks Build Cache
- Limited IDE support

What is Gradle used for?

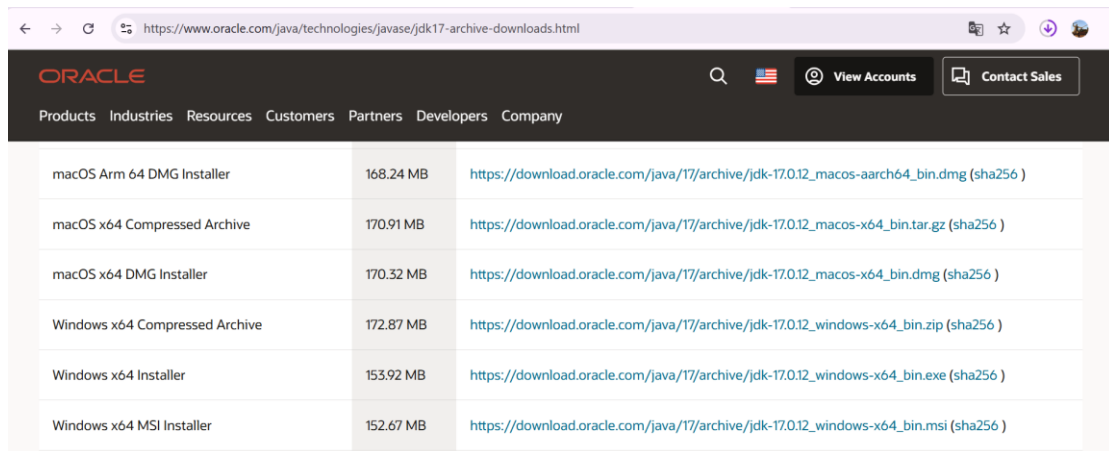

Gradle is very flexible & ideal for complex projects, where priorities are versatility, performance & incremental builds.

What is Maven used for?

Maven is simple to use and ideal for standard projects, where priorities are modularization, dependency management & consistency

MAVEN INSTALLATION

In windows, open the command prompt, and check for the java version. If the java is not installed install it with

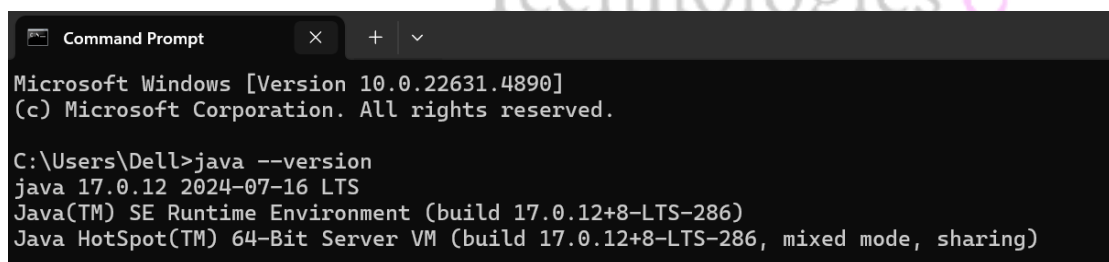

The screenshot shows the Oracle Java 17 archive downloads page. The page has a dark header with the Oracle logo and navigation links. Below the header is a table with six rows, each representing a different download option for Java 17.0.12. The table columns are: Product Name, Size, and Download Link.

Product Name	Size	Download Link
macOS Arm 64 DMG Installer	168.24 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_macos-aarch64_bin.dmg (sha256)
macOS x64 Compressed Archive	170.91 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_macos-x64_bin.tar.gz (sha256)
macOS x64 DMG Installer	170.32 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_macos-x64_bin.dmg (sha256)
Windows x64 Compressed Archive	172.87 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_windows-x64_bin.zip (sha256)
Windows x64 Installer	153.92 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_windows-x64_bin.exe (sha256)
Windows x64 MSI Installer	152.67 MB	https://download.oracle.com/java/17/archive/jdk-17.0.12_windows-x64_bin.msi (sha256)

https://download.oracle.com/java/17/archive/jdk-17.0.12_windows-x64_bin.exe

Check for the java using `java --version`

```
Microsoft Windows [Version 10.0.22631.4890]
(c) Microsoft Corporation. All rights reserved.

C:\Users\Dell>java --version
java 17.0.12 2024-07-16 LTS
Java(TM) SE Runtime Environment (build 17.0.12+8-LTS-286)
Java HotSpot(TM) 64-Bit Server VM (build 17.0.12+8-LTS-286, mixed mode, sharing)
```

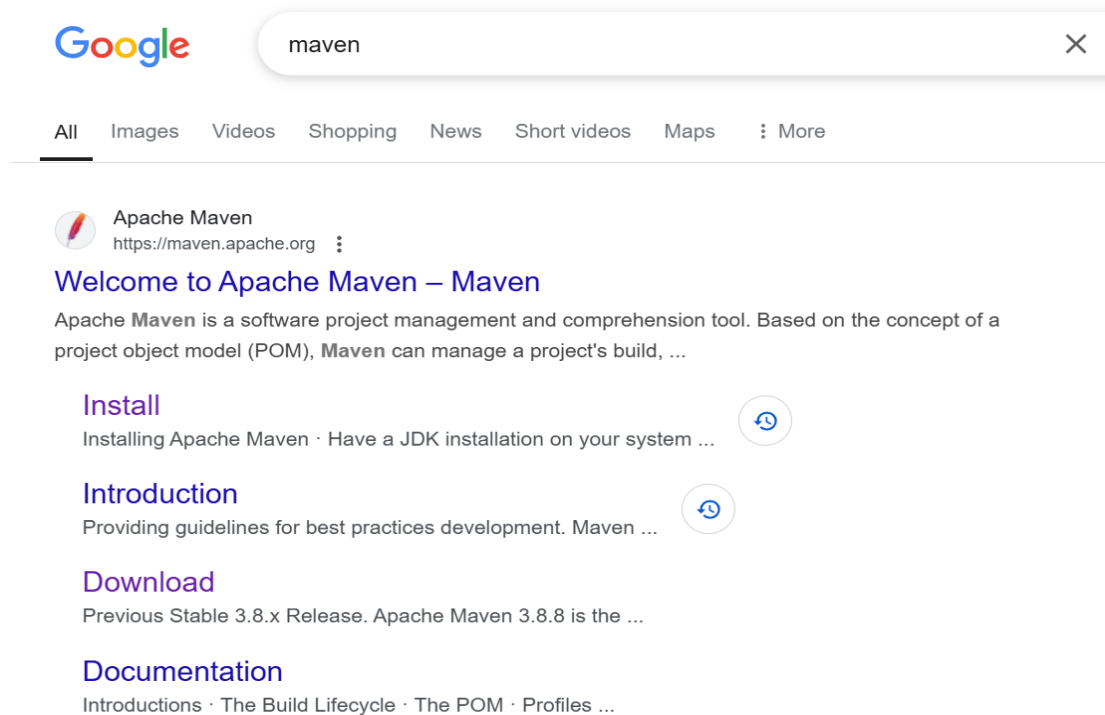

Search for the maven using `mvn --version`

```
Command Prompt
Microsoft Windows [Version 10.0.22631.4890]
(c) Microsoft Corporation. All rights reserved.

C:\Users\Dell>java --version
java 17.0.12 2024-07-16 LTS
Java(TM) SE Runtime Environment (build 17.0.12+8-LTS-286)
Java HotSpot(TM) 64-Bit Server VM (build 17.0.12+8-LTS-286, mixed mode, sharing)

C:\Users\Dell>mvn --version
'mvn' is not recognized as an internal or external command,
operable program or batch file.
```

In Google Search for the maven, and then click on the Downloads

Then you will be redirected to download files, then download for the binary zip file

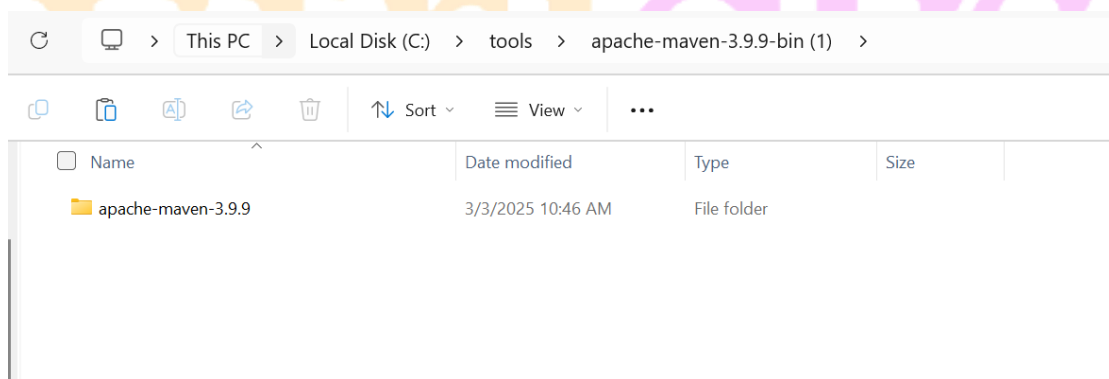

Files

Maven is distributed in several formats for your convenience. Simply pick a ready-made binary distribution archive and follow the [installation instructions](#). Use a source archive if you intend to build Maven yourself.

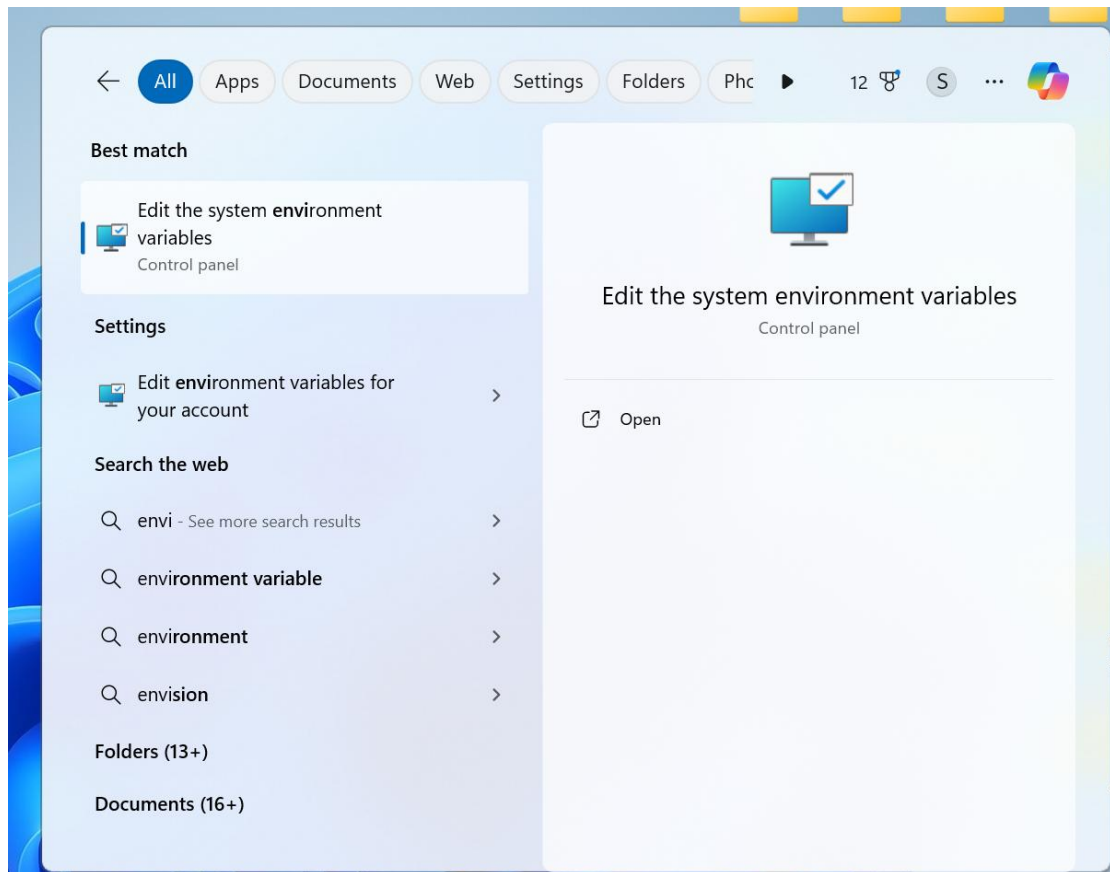

In order to guard against corrupted downloads/installations, it is highly recommended to [verify the signature](#) of the release bundles against the public [KEYS](#) used by the Apache Maven developers.

	Link	Checksums	Signature
Binary tar.gz archive	apache-maven-3.9.9-bin.tar.gz	apache-maven-3.9.9-bin.tar.gz.sha512	apache-maven-3.9.9-bin.tar.gz.asc
Binary zip archive	apache-maven-3.9.9-bin.zip	apache-maven-3.9.9-bin.zip.sha512	apache-maven-3.9.9-bin.zip.asc
Source tar.gz archive	apache-maven-3.9.9-src.tar.gz	apache-maven-3.9.9-src.tar.gz.sha512	apache-maven-3.9.9-src.tar.gz.asc
Source zip archive	apache-maven-3.9.9-src.zip	apache-maven-3.9.9-src.zip.sha512	apache-maven-3.9.9-src.zip.asc

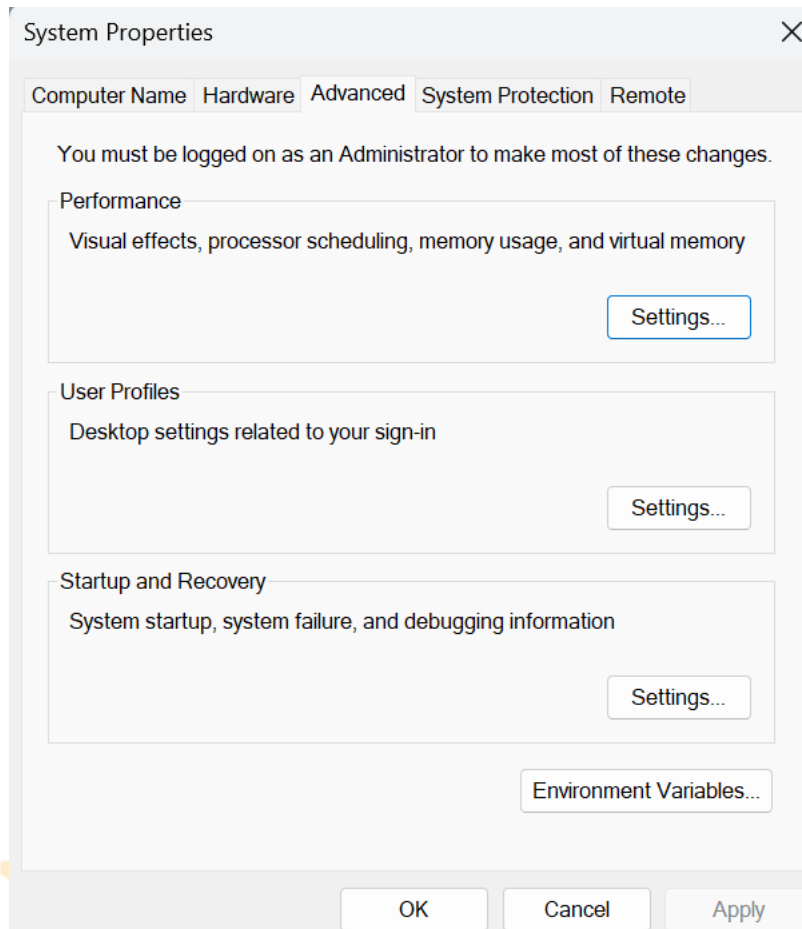

Then unzip the folder downloaded

After unzipping, at start check for the edit the system environment variables.

Click on the Environment Variables.

In User Variables click on New

Environment Variables

Why Gradle? · Gradle is the most popular build system for the ...

Click on the Binary Download and the binary zip file will be Downloaded

← → ↻ 🌐 gradle.org/releases/

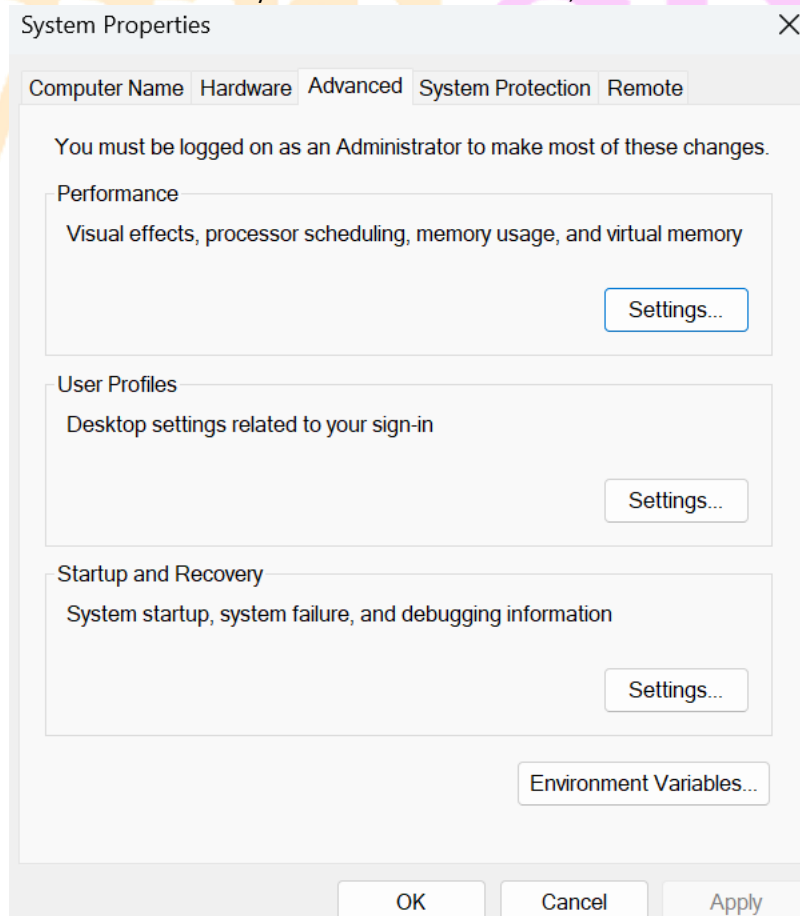

The Gradle team offers free [training](#)

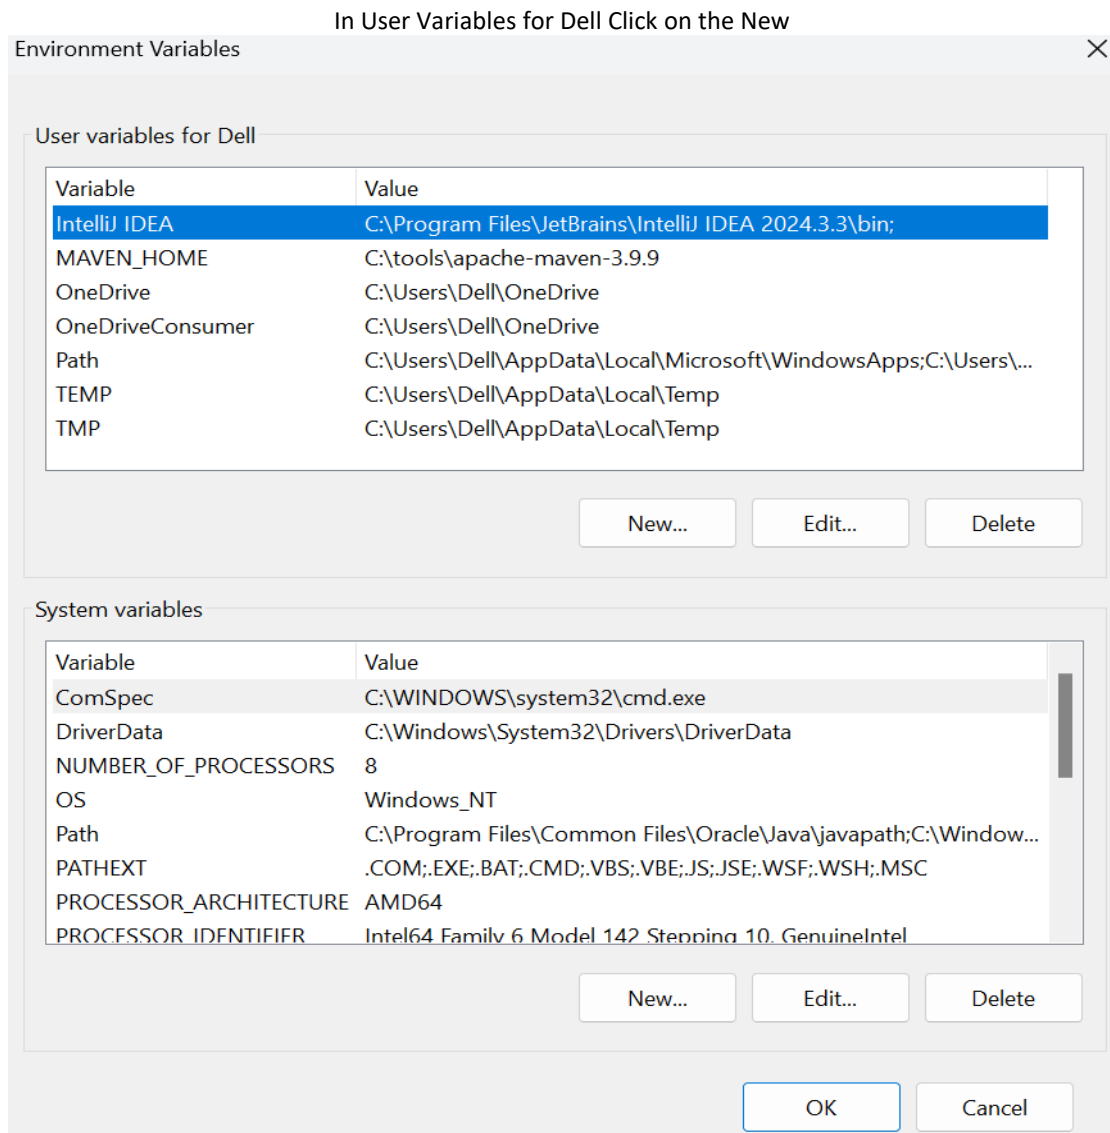

🔖 **v8.13**

📅 Feb 25, 2025

- Download: [binary-only](#) or [complete](#) ([checksums](#))
- [User Manual](#)
- [API Javadoc](#)
- [Groovy DSL Reference](#)
- [Release Notes](#)

In start, check for the Edit the System Environment Variable , Click on environment Variable

In Variable Name Add Variable name as GRADLE_HOME. And in Variable value add the gradle folder path

New User Variable ✕

Variable name:

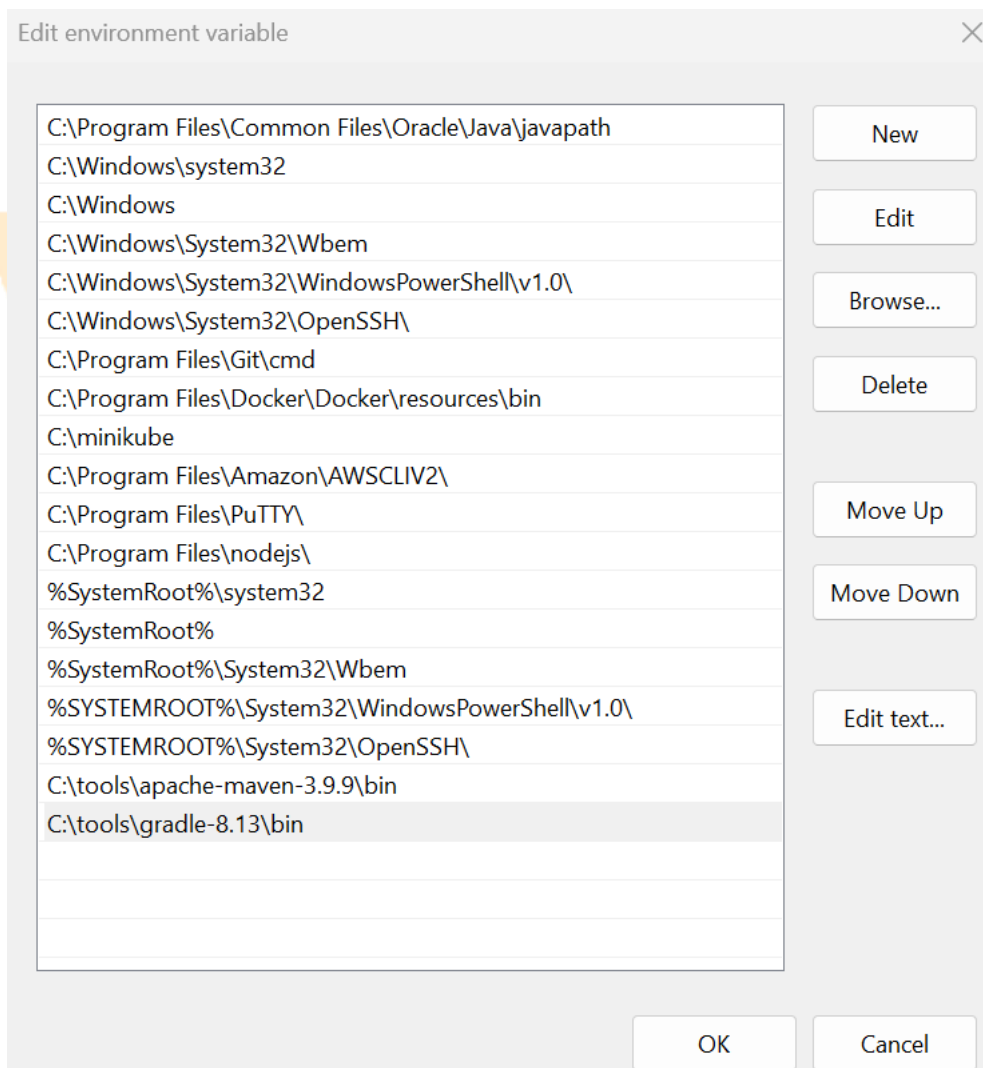

Variable value:

And in the System Variables click on the New

System variables

Variable	Value
ComSpec	C:\WINDOWS\system32\cmd.exe
DriverData	C:\Windows\System32\Drivers\DriverData
NUMBER_OF_PROCESSORS	8
OS	Windows_NT
Path	C:\Program Files\Common Files\Oracle\Java\javapath;C:\Window...
PATHEXT	.COM;.EXE;.BAT;.CMD;.VBS;.VBE;.JS;.JSE;.WSF;.WSH;.MSC
PROCESSOR_ARCHITECTURE	AMD64
PROCESSOR_IDENTIFIER	Intel64 Family 6 Model 142 Stepping 10. GenuineIntel

Click on New, and then add the bin folder path

Now check for the gradle version in the command prompt

```
Microsoft Windows [Version 10.0.22631.4890]  
(c) Microsoft Corporation. All rights reserved.
```

```
C:\Users\Dell>gradle -v
```

```
Welcome to Gradle 8.13!
```

```
Here are the highlights of this release:
```

- Daemon JVM auto-provisioning
- Enhancements for Scala plugin and JUnit testing
- Improvements for build authors and plugin developers

```
For more details see https://docs.gradle.org/8.13/release-notes.html
```

```
-----  
Gradle 8.13  
-----
```

```
Build time: 2025-02-25 09:22:14 UTC
```

```
Revision: 073314332697ba45c16c0a0ce1891fa6794179ff
